

Essential 8 Rapid Assessment.

Know where you stand. Know what to fix first.

A fast, fixed-price review of your organisation's implementation of the ASD Essential Eight, focused on the four strategies Tecala's consultants see exposed most often: Patch Applications, Patch Operating Systems, Multi-Factor Authentication and Application Control. In 2 weeks* you receive a board-ready view of your current maturity and exactly what to prioritise next.

Where the pressure sits

Pressure on your business	How the assessment delivers value
Ransomware & credential-based attacks	Benchmarks the controls that stop the most common entry points: unpatched applications and systems, weak authentication and uncontrolled application execution, before they're exploited.
Cyber insurance requirements	Insurers increasingly ask for evidence against Essential Eight maturity; this delivers an independent, standards-aligned view that underpins your discussions with them.
Security spend without measurable impact	Pinpoints which of the four strategies is furthest behind, so investment goes where it closes the biggest gap first.
Limited internal time & specialist capacity	A streamlined methodology of targeted interviews and technical review minimises burden on your team while leveraging senior Tecala security expertise.

What's included

Four prioritised strategies: Patch Applications, Patch Operating Systems, Multi-Factor Authentication and Application Control, assessed against the ASD Essential Eight Maturity Model. Strategies may be substituted by negotiation.

Expert-led, not automated: delivered by a senior Tecala security consultant who brings real-world context and judgement.

Four clear deliverables: executive summary, maturity evaluation, risk-based insights and a complimentary strategy consultation.

*Timelines begin at project kick-off and assume timely completion of the discovery process.
