

NIST CSF Rapid Assessment.

Prove your maturity. Direct your investment.

A fast, fixed-price benchmark of your security program against NIST Cyber Security Framework 2.0, covering all six Functions and 22 Categories. In 2 weeks* you receive a board-ready view of your current maturity, where the biggest gaps sit, and a prioritised roadmap to close them, without the cost or disruption of a full audit.

Where the pressure sits

Pressure on your business	How the assessment delivers value
Proving maturity to boards, insurers & partners	Delivers an independent, NIST-benchmarked view of your security posture that underpins the discussions you have with directors, cyber insurers and major customers with confidence.
Unclear governance & uneven control maturity	Tests one targeted, prioritised control objective across each of the 22 NIST Categories, quickly surfacing where governance, controls or operational execution are out of step.
Security spend without measurable impact	Pinpoints the gaps that actually move the risk needle, so future investment is directed where it materially strengthens resilience, not just where it ticks a box.
Limited internal time & specialist capacity	A streamlined methodology of targeted interviews and document review minimises burden on your team while leveraging senior Tecala security expertise.

What's included

Framework coverage: benchmarked across all six NIST CSF 2.0 Functions: Govern, Identify, Protect, Detect, Respond and Recover, and 22 associated Categories.

Expert-led, not automated: delivered by a senior Tecala security consultant who brings real-world context and judgement.

Four clear deliverables: executive summary, maturity evaluation, risk-based insights and a complimentary strategy consultation.
