

Policy Review Service.

Policies that work when it matters most.

A fast, expert-led review of your three most critical security policies, Incident Management, Vulnerability Management and Disaster Recovery, benchmarked against security policy best practice, including ISO 27001 by default. In just 1 week* you receive clear evidence of where your policies will hold up under pressure, where they won't, and exactly what to fix.

Where the pressure sits

Pressure on your business	How the assessment delivers value
Policies that fail under real incident pressure	Tests your incident, vulnerability and recovery policies for clarity, accountability and real-world usability, so your team acts decisively in a breach instead of searching for the right document.
Gaps between policy intent and practice	Exposes disconnects between your policies and how the business actually operates, helping to surface risks that may attract audit, insurance or security scrutiny.
Compliance, insurance & audit scrutiny	Benchmarks each policy against best practice, producing a defensible, evidence-based view ready for boards, insurers and external assessors.
Downtime & breach cost exposure	Strengthens the policies that govern how quickly you detect, contain and recover, aiming to reduce dwell time, downtime and the financial impact of an incident.
Limited internal time & specialist capacity	A streamlined methodology of targeted interviews and document review minimises burden on your team while leveraging senior Tecala GRC expertise.

What's included

Focused scope: the three policies with the greatest impact on risk and resilience: Incident Management, Vulnerability Management and Disaster Recovery.

Framework of your choice: benchmarked against security policy best practice, including ISO 27001 by default. NIST CSF, CIS18 or Essential Eight available on request.

Expert-led, not automated: delivered by a senior Tecala GRC consultant who brings real-world context and judgement.

Four clear deliverables: executive summary, gap analysis, prioritised improvement plan and a complimentary strategy consultation.

*Timelines begin at project kick-off and assume timely completion of the discovery process.
